DATASHEET

Logitech MX Ink

For Meta Quest 3, 3S, 2

A familiar pen-like feel, intuitive movements, and native Meta Horizon OS integration make MX Ink an essential tool for a broad range of VR/MR applications.

- **Intuitive and familiar:** MX Ink delivers the familiar feel of a pen with a pressure-sensitive tip, enabling seamless spatial tracking and effortless movement from 2D surfaces to 3D spaces—without breaking the workflow. Users are able to be fully immersed in the content without the distraction of the technology.
- **Native integration for easy deployment:** MX Ink is natively integrated into Meta Horizon OS, meaning it works right out of the box with Meta Horizon managed services (HMS), MDMs, and many of the key apps. With a simple, one-time pairing and a battery that lasts up to 7 hours (in a typical workflow), users can create, design, and interact instantly. Recharging is simple, too, via a USB-C cable.
- **Right tool for the job:** MX Ink completes the Meta Quest toolbox. Working seamlessly with Meta Quest Touch controllers and hand tracking, users can select the right tool for the right job, as they effortlessly switch between controllers, hand tracking, and stylus. Meta Quest Touch controllers for broad, immersive movements, and MX Ink for actions requiring fine motor control—such as annotation, writing, or drawing precise lines.
- **Compatibility:** MX Ink works seamlessly with many MR and VR education, healthcare, creativity and productivity apps, enabling immediate access to familiar tools without extra setup—keeping the focus on creating, not configuring.
